

Brother DR-200, 250, 300 OPC RESET SHEET TEMPLATE

For the last step in this cartridge a reset sheet will need to be installed. Photocopy or scan at 100% the template to the right using a high quality heavy paper. Carefully cut the pattern out and place on top of the drum section flat edge first in between the drum and transfer roller. Turn the drum until the back of the sheet is about halfway across the transfer roller. When your customer installs the drum unit, the start-up cycle will feed the reset sheet through the fusing assembly and reset the printer.
